

Independent Fork Positioner

Independent Fork Positioners - The fork positioner is a hydraulic device which allows the the one driving to be able to work the lift truck without leaving the seat. They are made out of high quality materials and are intended to endure the most challenging procedures and work surroundings. Side shifting units have the extra ability to laterally position the arms or the entire load so as to facilitate more precise carrying and position in a faster and more efficient method.

The unique blade pocket design enables the individual operating it to securely swing the unit's blades without any fear of damaging the positioning cylinders. This can allow the worker the choice to either perform independent or simultaneous fork movement, depending on the job requirement. For most forklifts with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be converted into blade positioners on available units.
